

PASSWORD MANAGEMENT RESOURCES:

Here are some great links for websites to help you to choose, manage and monitor your website usernames/passwords. Please spend some time becoming familiar with them, and bookmarking them for future reference.

- <https://www.wired.com/story/best-password-managers/>
- Again, one of **THE** most important things you can do **RIGHT** now, to keep yourself secure online, is to use a password manager. It creates new secure (i.e. long) passwords for you to use on new websites, it keeps all of your passwords in an encrypted vault, and it even syncs them across devices. They are quite easy to use as well. Please choose one for your PC, Mac, Android, iPhone, and web browsers.
- <https://1password.com/>
- I am now a big fan of, and highly recommend **1Password** (and Bit-Warden for a free version). I do not recommend LastPass anymore, due to some security missteps they have made recently.
- <https://howsecureismypassword.net/>
 - This website will inform you how long it might take a hacker to crack your chosen password
- <https://haveibeenpwned.com/>
 - An amazing website that will let you know, and warn you in the future, if either your email address or password have been discovered stolen anywhere on the Internet!
- <https://haveibeenpwned.com/passwords>
 - Here you check specifically for passwords you have used that may already be compromised by the bad guys

- <https://monitor.firefox.com/>
 - Mozilla Firefox's equivalent service to Have I Been Powned
- <https://www.themooltipass.com/>
 - **Mooltipass** is an actual hardware password manager you carry in your pocket. Pretty cool!
