

Identifying our Target

Scope

The scope of a penetration test engagement defines which IP ranges, hosts, and applications should be test subjects during the engagement.

Bug Bounty Program

A bug bounty program is a way for companies to incentivize ethical hackers to find and report security vulnerabilities or bugs in their websites, applications, or systems. So, if you find a bug in any of the programs listed here, like this one and you report it. You will get paid for it. It is as simple as that.

Information Gathering

We will start off with a basic google search only.

- Company website - look for all the links in footer also
 - Robots.txt file
 - Company location - Get Physical locations of office - Google Maps, Street View.
 - Find contact information of customer support
 - Any apps
 - Any key members like founder and other senior staff
 - Any other associated product
 - Social media handles
-
