

# Findomain Fastest Subdomain Resolver

The screenshot shows the GitHub repository page for Findomain. At the top, the repository name 'Findomain / Findomain' is displayed, along with a 'Sponsor' button, a 'Watch' button with a dropdown arrow, '45' watchers, a 'Star' button, and '1.6' stars. Below this is a navigation bar with links for 'Code', 'Issues 3', 'Pull requests', 'Actions', 'Projects', 'Wiki', 'Security', and 'Insights'. The main content area shows the 'master' branch selected, with '2 branches' and '63 tags' available. There are buttons for 'Go to file', 'Add file', and 'Code'. A commit history table is visible, listing recent commits by Edu4rdSHL. To the right, an 'About' section describes the project as 'The fastest and cross-platform subdomain enumerator, do not waste your time.' and lists related projects: 'subdomain-scanner', 'subdomains-monitoring', and 'subdomains-enumeration'.

Commit	Author	Message	Time
4692d57	Edu4rdSHL	Update README.md	on 7 Oct
			645 commits
		.github Update FUNDING.yml	2 months ago
		config_examples Create findomain.example.json	5 months ago
		docker Add dockerhub option for using the docker image.	last month
