

# Findomain Fastest Subdomain Resolver

The screenshot shows the GitHub repository page for Findomain. At the top, there's a navigation bar with 'Findomain / Findomain' on the left and 'Sponsor', 'Watch' (45), and 'Star' (1.6) on the right. Below this is a secondary navigation bar with 'Code', 'Issues' (3), 'Pull requests', 'Actions', 'Projects', 'Wiki', 'Security', and 'Insights'. The main content area shows the repository details: 'master' branch, 2 branches, and 63 tags. A commit by Edu4rdSHL is highlighted, showing 'Update README.md' with commit hash 4692d57 on Oct 7, and 645 total commits. Below the commit, a list of files is shown: '.github' (Update FUNDING.yml, 2 months ago), 'config\_examples' (Create findomain.example.json, 5 months ago), and 'docker' (Add dockerhub option for using the docker image., last month). On the right, the 'About' section describes it as 'The fastest and cross-platform subdomain enumerator, do not waste your time.' and lists related projects: 'subdomain-scanner', 'subdomains-monitoring', and 'subdomains-enumeration'.
