Passive Interfaces:

- When you use the network command in OSPF, two things will happen.
- All interfaces that have a network that falls within the range of the network command will be advertised in OSPF.
- OSPF hello packets are sent on these interfaces.
- Sometimes it's undesirable to send OSPF hello packets on certain interfaces like ISP side or in Endpoints.
- So to stop hello packets we use Passive Interfaces.
- Passive-Interface command is used to disable sending updates on specific interface.
- Mostly the passive-interface command restricts the outgoing advertisements only.
- Individually use no passive-interface command on interfaces wants to send updates.
- Passive-interface command stops both outgoing & incoming routing updates.
- Command causes Router to stop sending & receiving hello packets on interface.
- The passive-interface command stops sending the outgoing hello packets.
- The Router cannot form any neighbor relationship via the passive interface.

Lab on Passive Interfaces:

R1 Configuration:

```
en
config t
hostname R1

int f0/0
ip add 192.168.12.1 255.255.255.0
no sh

int lo0
ip add 1.1.1.1 255.0.0.0
```

R2 Configuration:

```
en
config t
hostname R2

int f0/0
ip add 192.168.12.2 255.255.255.0
no sh

int lo0
ip add 2.2.2.2 255.0.0.0
```
