

# Exploit the Android Platform through ADB using PhoneSploit

***ILABS***  
***CEH PRACTICAL***

@mmar

**Android Debug Bridge (ADB) is a versatile command-line tool that lets you communicate with a device. ADB facilitates a variety of device actions such as installing and debugging apps, and provides access to a Unix shell that you can use to run several different commands on a device.**

**Usually, developers connect to ADB on Android devices by using a USB cable, but it is also possible to do so wirelessly by enabling a daemon server at TCP port 5555 on the device.**

## Aim

In this task, we will exploit the Android platform through ADB using the PhoneSploit tool.
