

## **CCIE Enterprise Infrastructure v1.0 Bootcamp Labs - OSPF Troubleshooting**

1. R6's Loopback0 is unreachable from the rest of the OSPF network. Resolve the problem so that connectivity is obtained to the Loopback0 interface of R6.
2. R1 and R3 cannot form OSPF adjacency. Resolve the problem so that they form adjacency and have connectivity to each other's Loopback0 networks.
3. R11's Loopback0 is unreachable from the rest of the OSPF network. Resolve the problem so that connectivity is obtained to the Loopback0 interface of R11.
4. R12's Loopback0 is unreachable from the rest of the OSPF network. Resolve the problem so that connectivity is obtained to the Loopback0 interface of R12.
5. Reachability problems have been reported to R7's Loopback0 network. Resolve the problem so that all devices have connectivity to R7's Loopback0 network.
6. R14's Loopback 0 is unreachable. Resolve the problem so connectivity is restored to R14.
7. R9's Loopback0 is unreachable from the rest of the OSPF network. Resolve the problem so that connectivity is obtained to the Loopback0 interface of R9.
8. SW5's Loopback0 is unreachable from the rest of the OSPF network. Resolve the problem so that connectivity is obtained to the Loopback0 interface of SW5.
9. SW3's Loopback0 is unreachable from the rest of the OSPF network. Resolve the problem so that connectivity is obtained to the Loopback0 interface of SW3.
