Cisco ACI Multi-Site & Advanced Integrations

This course takes your Cisco ACI skills to the next level with advanced integrations and multi-site deployments. You'll learn how to connect ACI with virtualization platforms using Virtual Machine Manager (VMM), implement service graphs for network services, and scale deployments with Multi-Pod and Multi-Site. The course also introduces the Cisco Nexus Dashboard Orchestrator (NDO) to simplify cross-site policy and connectivity management. By the end, you'll be able to design and deploy enterprise-grade, multi-site ACI solutions with centralized orchestration and automation.
