

Historical DNS Records

While performing Passive Information Gathering, Historical DNS records can be used to build a profile of a target's digital activities over time. By collecting DNS records from various sources, we can uncover information that may not be readily available through current DNS queries alone.

By understanding how to leverage historical DNS records, we can gain a more comprehensive view of a target's infrastructure and potentially uncover information that could be useful for security assessments or penetration testing.

So, lets jump right into it.

- Complete DNS History - <https://completedns.com>
- Security Trails - <https://securitytrails.com/> -> Need account
- DNS history - <https://dnshistory.org/>
- DNS Dumpster - <https://dnsdumpster.com/>

See, the power of historical DNS records comes into picture when you are performing DNS forensics, like on a cybercriminals gang or some shady websites. On that note, i will wind up this section and will meet you in the next one.
