Beginning C++ Programming

Reading from a Text File – Live Demo – Part

At around 12:00 in this video, I wrote code that loops while the end-of-file hasn't been detected.

This will work with the data file provided if you are on Windows. However, if you are on Linux/Mac you may not see correct behavior. This is because of the differences in the way Windows and Linux/Mac handle line terminators and end-of-file.

Rather than checking for end-of-file in the while condition, use the style that I show at around 13:20 in the video.

Thanks to Jeremy for pointing that out.

Best regards,
Frank Mitropoulos
