Beginning C++ Programming
C++ Strings

In the second slide in this video (at about 2:20) there is a typo in the example for s5 -- there is a mismatched parenthesis and curly brace.

The correct line should read:

```
String s5 {"Frank", 3};
 or
String s5 ("Frank", 3);
```

Thanks to Deanna, Dian and Ivan for pointing that out.

In the slide beginning at about 12:40 in the video, the second display statement should have `endl` and not `end.`

Thanks to Amit and Fabian for pointing that out.

In the slide beginning at about 11:25 in the video, the last example should have a terminating semi-colon.

Thanks to Emanuel for pointing that out.

In the slide beginning at about 6:00 in the video, the example shows that the null character will be displayed when the loop executes. This is incorrect. The null character will not be displayed for C++ string objects.

Thanks to Rodion and others for pointing this out.
