Email Tracking

Objectives:

- Utilize email communications to gather target information like IP addresses, geolocation, and end point details

---

- We're sitting here in the Footprinting and Recon domain for CEH, and we need to take a look at Email Tracking. Just a quick question before we continue. What is email tracking? :)

    - Verify that an email was successfully delivered and opened

        - Proxy use
        - IP address
        - Geo-location
        - How long it took to read
        - Were links clicked
        - OS type
        - Browser type
        - Host device type

- How can these tracking programs get all this information?

    - Read Receipts

        - Users opt-in to reporting email status

    - Tracking Pixels

        - Tiny Image embedded into the email

            - 1 pixel x 1 pixel generated by code built to track user activity

    - Trackable Links

- How does one utilize email tracking?

    - Many different tools

        - Linkly
        - bitly
        - Infoga
        - EmailTrackerPro
