Encryption Made Easy

Encryption software provides confidence that your information remains yours, even if you were breached. Protect any kind of data, at rest, and wherever it goes, with CryptoForge™ encryption software.

Our easy-to-use encryption software solution allows individuals and organizations to secure their sensitive data with professional encryption. Whether you need to secure files on your computer, upload encrypted files and folders to the cloud, or distribute encrypted files among your contacts or partners, CryptoForge is the most effective, easy-to-use encryption software product available.

Main Features

- Really easy-to-use!
- Large file support: It supports 64-bit file sizes (it can encrypt files of up to 16TB on NTFS volumes).
- Send encrypted files to anyone: Recipients don't have to have CryptoForge encryption software installed to be able to decrypt your files.
- You can decrypt files on any computer with the free app!
- Based on public domain encryption algorithms: The strong encryption implemented in our software, like AES encryption, is the best encryption available today.
- Multiple encryption: Your data will be safe, even if in the future one encryption algorithm were successfully attacked.
- Built-in file shredder: Matches and exceeds DoD specifications (US Department of Defense).

Need more on data encryption software? [Click here](#) to see our comprehensive information.

Encryption

- ❖ Navigate to file. Right click it and select to encrypt. Give it a password and its encrypted

Decryption

- ❖ Navigate to encrypted file, Right click to decrypt it
