Blockchain Architecture

Blockchain Architecture

Enterprise and Legacy Applications: Applications that are in development or already implemented in the blockchain solution, and have some extensive features.

Integration Platforms: A layer with different kinds of protocols like the SOAP and REST, governance, and API management.

Blockchain Access layer: It provides the basic features for fetching and writing data to the blockchain.

Analytics Layer: It consists of reporting, dashboard or analytics-based system that provides the analytical result of the final data.

Hyperledger Architecture
