# DOCKER

Docker Images & Layers

➤ Each image consists of a series of layers. Docker makes use of union file systems to combine these layers into a single image.

➤ Union file systems allow files and directories of separate file systems, known as branches.

➤ Show Image Layers:
docker history <image_name>

➤ History command shows different layers, command used for each layer, and the exact size of each image.

See you in next lecture …
