

Configuring the WiFi Network for Maximum Security

Secure the WiFi Router:

1. Change the default password of the router with a strong one.
2. Connect to the WiFi router only using HTTPS.
3. Disable remote (from the Internet) administration of the router.
4. Disable services that are running on the router but are never used.
5. Update the firmware to its latest version.

Secure the wireless communication:

1. Use only WPA2 with a very strong password.
2. Disable WPS or Wi-Fi Protected Setup.
3. Use MAC Address filtering.
