

TASKS TO COMPLETE

Windows Software To-do list #4

- Change the working directory:
 - Use SetCurrentDirectory method of Directory class.
- List files and folders in directory:
 - EnumerateDirectories, EnumerateFiles methods of Directory class, StringBuilder class and Select clauses.

Create 2 functions SetWorkingDirectory, EnumWorkingDirectory inside Operations class. If the command contains “cd” call SetWorkingDirectory() and if command contains “ls” call EnumWorkingDirectory().

If you are new to this concepts, learn more about Select Clauses, Directory class and StringBuilder class.
