

Android Security & Exploitation

Aditya Gupta (@adi1391)

Founder, Attify (<http://attify.com>)

adi@attify.com

Certifications : <http://securitytube-training.com>

Pentester Academy : <http://PentesterAcademy.com>

AndBug

- Wrapper around JDWP
- Much more interactive shell compared to JDB
- Once we identify the class/method, we can go to JDB to analyze and set breakpoints
- <https://github.com/swdunlop/AndBug>
- Try it on Insecure Bank

AndBug

- Find the method responsible for the transaction
- Trace the method and analyze the arguments passed when a transaction happens
- `classes com.android.insecurebank`
- `methods [name of the class]`
- `mt [method-name]`
