You answered 3 out of 3 questions correctly

1. Unattended Ground Sensing systems are often used as a replacement for security guards.

It is quite common for organizations to use UGS systems instead of using security guards to monitor and protect the grounds.

2. It is impossible to bypass anti-climb fencing.

While anti-climb fencing can be difficult to bypass, they can be defeated by using hand/boot spikes.

3. Most motion sensing systems (ie: detectors or cameras) can be thwarted by using a mylar shield to mask one's body heat.

Mylar blankets and thermal radiant film can be used to bypass PIR sensors.
